Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

10/016,157

Applicant(s)

SUN ET AL.

Examiner

Carolyn L Smith

Art Unit

1631

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 03 April 2003.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) 6 and 9-17 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-5,7 and 8 is/are rejected.
- 7) ☒ Claim(s) 1-5,7 and 8 is/are objected to.
- 8) ☒ Claim(s) 1-17 are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

**Priority under 35 U.S.C. §§ 119 and 120**

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 9.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☒ Other: *See Continuation Sheet*.

Continuation of Attachment(s) 6). Other: Sequence Match Listing (7 pages).

### **DETAILED ACTION**

Applicants' election with traverse of Group I (claims 1-5, 7, and 8) and sequence election of SEQ ID NO: 5 in Paper No. 11, filed 4/3/03, is acknowledged. Claims 6 and 9-17 are withdrawn from consideration as being drawn to non-elected Groups.

Applicants' traversal is on the grounds that the MPEP § 803 provides two criteria which must be met for a restriction requirement to be proper summarized as follows: (1) the inventions must be independent or distinct and (2) there would be a search burden on the Examiner if the restriction is not required. Applicants' further state a prior art search relating to an elected sequence would also reveal any references teaching uses for the elected sequence.

Applicants' disagreement with the restriction set forth in the previous Office action is found unpersuasive because the examination of all distinct inventions in this application would create an undue search burden for the Examiner due to the non-overlapping material found among each Group as set forth in the previously mailed Restriction paper.

The requirements are still deemed proper and are therefore made FINAL.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The present title is directed to compositions and methods relating to colon specific genes and proteins, whereas in contrast the elected claims are specifically directed to nucleic acids, vectors, and host cells.

Claims herein under examination are 1-5, 7, and 8.

### ***Specification***

The disclosure is objected to because it contains an embedded hyperlink and/or other form of browser-executable code, such as on page 54, lines 30-31, and elsewhere. Applicant is required to delete the embedded hyperlink and/or other form of browser-executable code. See MPEP § 608.01.

### ***Claim Objections***

Claim 1 is objected to due to the inclusion of subject matter which has been non-elected due to restriction requirement and therefore withdrawn from consideration. Claims 2-5, 7, and 8 are also rejected due to their direct or indirect dependency from claim 1. The non-elected subject matter is summarized as follows: Claim 1 is directed to including non-elected sequences. Correction is suggested by stating only the subject matter (SEQ ID NO: 5) which is part of the instant invention.

### **PATENTABLE UTILITY GUIDELINES**

The pending claims have been reviewed in light of the Utility Examination Guidelines and Guidelines for Examination of Patent Applications under 35 U.S.C. 112, first paragraph, "Written Description" Requirement, Federal Register, Vol. 66, No. 4, pages 1092-1111, Friday, January 5, 2001.

The examiner is using the following definitions in evaluating the claims for utility.

"Specific" - A utility that is *specific* to the subject matter claimed. This contrasts with a *general* utility that would be applicable to the broad class of the invention.

"Substantial" - A utility that defines a "real world" use. Utilities that require or constitute carrying out further research to identify or reasonably confirm a "real world" context of use are not substantial utilities.

"Credible" - Credibility is assessed from the perspective of one of ordinary skill in the art in view of the disclosure and any other evidence of record that is probative of the applicant's

Art Unit: 1631

assertions. That is, the assertion is an inherently unbelievable undertaking or involves implausible scientific principles.

"Well-established" - a specific, substantial, and credible utility which is well known, immediately apparent, or implied by the specification's disclosure of the properties of a material, alone or taken with the knowledge of one skilled in the art.

***Claims Rejected Under 35 U.S.C. § 101***

35 U.S.C. § 101 reads as follows:

"Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title".

Claims 1-5, 7, and 8 are rejected under 35 U.S.C. § 101 because the claimed invention lacks patentable utility due to its not being supported by a specific, substantial, and credible utility or, in the alternative, a well-established utility.

The critical limitation of claims 1-5, 7, and 8 is the nucleotide sequence of the claimed nucleic acids, vector and host cell, SEQ ID NO: 5. The claimed nucleic acid, vector, and host cell are not supported by a specific utility, because the disclosed uses of these compositions are not specific and are generally applicable to the colon cancer polynucleotides. The specification states the polynucleotides can be used in diagnostic methods (page 95) and monitoring colon cancer in patients (page 101). The specification summarizes general sequence uses in modern biotechnology (i.e. making pharmaceutical compositions (page 105)), but never connects the specifically elected sequence (SEQ ID NO: 5) to any particular or available utility. The above-mentioned list of possible utility for the claimed sequence falls short of a readily available utility.

These are non-specific uses that are applicable to many polynucleotides, vectors and host cells, and are not particular or specific to the polynucleotides, vectors, and host cells being claimed.

Further, these claimed polynucleotides, vectors, and host cells are not supported by a substantial utility, because no substantial utility has been established for the claimed subject matter. SEQ ID NO: 5 may indeed be the sequence found in cancerous colon; however, further research would be required to confirm a “real world” context of use. For example, basing gene expression analysis solely on a CLASP software program does not immediately identify a real world use. Also, identifying a sequence itself does not define a “real world” context of use.

Applicant should explicitly identify a specific, substantial, and credible utility for the claimed invention and establish a probative relation between any evidence of record and the originally disclosed properties of the claimed invention.

Due to a lack of either an art recognized or alleged well established utility, the instant invention has been rejected due to also lacking the required combination of a specific, substantial, and credible utility. Although it may be credible that the polynucleotide of SEQ ID NO: 5 is only differentially expressed in cancerous colon tissue, the lack of a specific and substantial utility, as explained above, sufficiently supports this rejection.

***Claim Rejections – 35 U.S.C. 112, first paragraph***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Factors to be considered in determining whether a disclosure would require undue experimentation have been summarized in *Ex parte Forman*, 230 USPQ 546 (BPAI 1986) and reiterated by the Court of Appeals in *In re Wands*, 8 USPQ2d 1400 at 1404 (CAFC 1988). The factors to be considered in determining whether undue experimentation is required include: (1) the quantity of experimentation necessary, (2) the amount or direction presented, (3) the presence or absence of working examples, (4) the nature of the invention, (5) the state of the prior art, (6) the relative skill of those in the art, (7) the predictability or unpredictability of the art, and (8) the breadth of the claims. The Board also stated that although the level of the skill in molecular biology is high, the results of experiments in genetic engineering are unpredictable. While all of these factors are considered, a sufficient amount for a *prima facie* case are discussed below.

#### LACK OF ENABLEMENT

Claims 1-5, 7, and 8 are rejected under 35 U.S.C. § 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the claimed invention.

For a sequence putatively assigned a biological function, even if correct, does not appear to be defined as to what use it is to be applied. The significance of the sequence is unconfirmed, further rendering it indiscernible how someone of skill in the art would use such an entity.

Due to the large quantity of experimentation necessary to determine activity or property of the disclosed nucleic acid, vector, and host cell, such that it can be determined how to use the claimed sequence, the lack of direction/guidance presented in the specification regarding the

Art Unit: 1631

same, and the breadth of the claims which fail to recite a particular biological activities, the specification fails to teach the skilled artisan how to use the claimed invention.

Without further data or sound scientific reasoning, it appears speculative whether the polynucleotide of SEQ ID NO: 5 plays a role in any of the asserted utilities as discussed above in the 35 U.S.C. § 101 rejection. Relying on predictions of biomolecule function based on a computer program (CLASP<sup>TM</sup>) is unpredictable (see third to last paragraph of the 35 U.S.C. § 101 rejection). With this in mind, additional evidence is necessary in order to satisfy the current lack of enablement. Several options exist to overcome this lack of enablement issue, such as supplying additional data or other scientific reasoning that would lead one of ordinary skill in the art to be able to make and/or use the present invention.

Also, since the claimed invention is not supported by a specific, substantial, and credible utility or a well-established utility for the reasons set forth above (refer to the 35 U.S.C. § 101 rejection), one skilled in the art would not know how to use the claimed invention.

#### LACK OF WRITTEN DESCRIPTION

Claims 1-5, 7, and 8 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor, at the time of the invention was filed, had possession of the claimed invention.

The specification discloses SEQ ID NO: 5 which corresponds to a nucleic acid sequence. SEQ ID NO: 5 and its full complement meet the written description provisions of 35 U.S.C. 112, first paragraph. However, claims 1-5, 7, and 8 are directed to encompass sequences that

Art Unit: 1631

hybridize to SEQ ID NO: 5 and sequences having a recited degree of homology which do not meet the written description provision of 35 U.S.C. 112, first paragraph. Please note the "60% identical" as recited in claim 1 (line 8), could also contain sequences including the entire sequence of SEQ ID NO: 5 plus up to 40% of additional sequence on either end of SEQ ID NO: 5 which fails to meet the written description provision of 35 U.S.C. 112, first paragraph. Due to the open claim wording of "comprising" in claim 1, this claim is directed to encompass gene sequences that do not meet the written description provision of 35 U.S.C. 112, first paragraph. The specification provides insufficient written description to support the genus encompassed by these claims.

Vas-Cath Inc. v. Mahurkar, 19 USPQ2d 1111, makes clear that "applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of the invention. The invention is, for purposes of the 'written description' inquiry, whatever is now claimed." (See page 1117.) The specification does not "clearly allow persons of ordinary skill in the art to recognize that [he or she] invented what is claimed." (See Vas-Cath at page 1116.)

With the exception of SEQ ID NO: 5, the skilled artisan cannot envision the detailed chemical structure of the encompassed polynucleotides and/or proteins, regardless of the complexity or simplicity of the method of isolation. Adequate written description requires more than a mere statement that it is part of the invention and reference to a potential method for isolating it. The nucleic acid itself is required. See Fiers v. Revel, 25 USPQ2d 1601, 1606 (CAFC 1993) and Amgen Inc. V. Chugai Pharmaceutical Co. Ltd., 18 USPQ2d 1016. In Fiddes v. Baird, 30 USPQ2d 1481, 1483, claims directed to mammalian FGF's were found unpatentable due to lack of written description for the broad class. The specification provided only the bovine sequence.

Finally, University of California v. Eli Lilly and Co., 43 USPQ2d 1398, 1404, 1405 held that:

...To fulfill the written description requirement, a patent specification must describe an invention and do so in sufficient detail that one skilled in the art can clearly conclude that "the inventor invented the claimed invention." Lockwood v. American Airlines, Inc., 107 F.3d 1565, 1572, 41 USPQ2d 1961, 1966 (1997); In re Gosteli, 872 F.2d 1008, 1012, 10 USPQ2d 1614, 1618 (Fed. Cir. 1989) (" [T]he description must clearly allow persons of ordinary skill in the art to recognize that [the inventor] invented what is claimed."). Thus, an applicant complies with the

Art Unit: 1631

written description requirement "by describing the invention, with all its claimed limitations, not that which makes it obvious," and by using "such descriptive means as words, structures, figures, diagrams, formulas, etc., that set forth the claimed invention." *Lockwood*, 107 F.3d at 1572, 41 USPQ2d at 1966.

Therefore, only SEQ ID NO: 5, but not the full breadth of the claims, meet the written description provision of 35 USC 112, first paragraph. The species specifically disclosed are not representative of the genus because the genus is highly variant. Applicant is reminded that Vas-Cath makes clear that the written description provision of 35 USC 112 is severable from its enablement provision. (See page 1115.)

***Claims Rejected Under 35 U.S.C. § 112, second paragraph***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-5, 7, and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which the applicant regards as the invention.

Claim 1 (line 6) recites the phrase "selectively hybridizes" which is vague and indefinite. It is unclear which hybridizing criteria such as stringency conditions (i.e. buffers, pH of buffer, etc.) or whether low, medium, or high stringency is meant. Applicants can resolve this issue by particularly pointing out the stringent conditions that are intended to allow the polynucleotide to hybridize. Clarification of the metes and bounds of the instant claims is required. Claims 2-5, 7, and 8 are also rejected due to their direct or indirect dependence from claim 1.

Art Unit: 1631

Claims 2-5 and 8 recite the phrase “according to” which is vague and indefinite. It is unclear to what extent the “according to” must be followed. Clarification of the metes and bounds of the instant claims is requested.

### ***Claim Rejections – 35 USC §102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 4, and 5 are rejected under 35 U.S.C. 102(a) as being anticipated by Genbank (Accession Number AK025743).

GenBank discloses a *homo sapiens* cDNA sequence (Accession Number AK025743, residues 1-2373) which has 99.3% similarity to SEQ ID NO: 5 (residues 1-2373). Thus, GenBank anticipates the limitations in claims 1, 2, 4, and 5.

Claims 1, 3, 4, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by GenBank (Accession Number AP000067).

GenBank discloses a homo sapiens genomic DNA sequence (Accession Number AP000067, residues 48624-50997) which has 99.2% similarity to SEQ ID NO: 5 (residues 1-2375). Thus, GenBank anticipates the limitations in claims 1, 3, 4, and 5.

Claims 1-5, 7, and 8 are rejected under 35 U.S.C. 102(e)(2) as being anticipated by Endege et al (P/N 6,262,334 B1).

As the word "hybridizes" in claim 1 (line 6) encompasses fragments, Endege et al. disclose human gene fragment (SEQ ID NO: 202, residues 332-349) which matches 100% with fragment of SEQ ID NO: 5 (residues 628-645) of the instant invention. Endege et al. disclose nucleic acids which hybridize to SEQ ID NO: 202 (col. 3, lines 3-10). Endege et al. disclose vectors, using SEQ ID NO : 202 which can be used to express a gene in a host cell (col. 2, lines 50-60 and col . 25, lines 9-21). Endege et al. disclose obtaining polynucleotides of their invention from mammalian cells, either genomic or cDNA (col. 16, lines 29-47). Thus, Endege et al. anticipate the limitations in claims 1-5, 7, and 8.

### ***Conclusion***

No claim is allowed.

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and

Art Unit: 1631

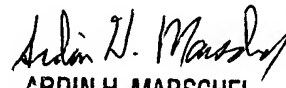

1157 OG 94 (December 28, 1993) (See 37 CFR §1.6(d)). The CM1 Fax Center number is either (703) 308-4242 or (703) 305-3014.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carolyn Smith, whose telephone number is (703) 308-6043. The examiner can normally be reached Monday through Friday from 8 A.M. to 4:30 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward, can be reached on (703) 308-4028.

Any inquiry of a general nature or relating to the status of this application should be directed to Legal Instruments Examiner Tina Plunkett whose telephone number is (703) 305-3524 or to the Technical Center receptionist whose telephone number is (703) 308-0196.
